Documentation For Rehabilitation: A Guide To Clinical Decision Making In Physical Therapy, 3e

Synopsis

Better patient management starts with better documentation! Documentation for Rehabilitation: A Guide to Clinical Decision Making in Physical Therapy, 3rd Edition shows how to accurately document treatment progress and patient outcomes. Designed for use by rehabilitation professionals, documentation guidelines are easily adaptable to different practice settings and patient populations. Realistic examples and practice exercises reinforce concepts and encourage you to apply what you've learned. Written by expert physical therapy educators Lori Quinn and James Gordon, this book will improve your skills in both documentation and clinical reasoning. A practical framework shows how to organize and structure PT records, making it easier to document functional outcomes in many practice settings, and is based on the International Classification for Functioning, Disability, and Health (ICF) model – the one adopted by the APTA. Coverage of practice settings includes documentation examples in acute care, rehabilitation, outpatient, home care, and nursing homes, as well as a separate chapter on documentation in pediatric settings. Guidelines to systematic documentation describe how to identify, record, measure, and evaluate treatment and therapies – especially important when insurance companies require evidence of functional progress in order to provide reimbursement. Workbook/textbook format uses examples and exercises in each chapter to reinforce your understanding of concepts. NEW Standardized Outcome Measures chapter leads to better care and patient management by helping you select the right outcome measures for use in evaluations, re-evaluations, and discharge summaries. UPDATED content is based on data from current research, federal policies and APTA guidelines, including incorporation of new terminology from the Guide to Physical Therapist 3.0 and ICD-10 coding. EXPANDED number of case examples covers an even broader range of clinical practice areas.

Very complete in every way. Especially the contributions from Fearon and Levine. Those parts alone are worth the price of this book as they inform the student/reader of legal and reimbursement issues connected to documentation. One very minor quibble regarding the section on EMR and the drawbacks of such. I think the author hits the nail with a fairly strong blow but I would add one important warning and that is that EMR allows the author to lose focus on what is happening. I review PT charts and see many therapist relying on the EMR software to "copy forward" elements of the evaluation without having to directly address them (such as goals, frequency/duration, etc.). Understandably a large portion of the book is taken up with evaluation. But this makes complete sense. If one doesn't get the first part right, the rest is just building on a flimsy foundation.

loved this book and gave lot of information to correct my practice of document writing

Can be more direct to the point
